

## ***Recombinant Human Ribosomal Phosphoprotein P0***

### **Antigen Specification**

**Product Number: 14100**

**Description:**

Human ribosomal phosphoprotein P0 protein (belongs to a group of antigens also called acidic ribosomal phosphoproteins or ribosomal P-proteins).

Recombinant antigen for solid (ELISA) and fluid phase diagnostic assays.

**Immunological function:**

Binds IgG-type human auto-antibodies.

**Origin:**

Recombinant. Expressed by recombinant baculovirus (*Autographa californica* multiple nuclear polyhedrosis virus; AcMNPV) infection of *Spodoptera frugiperda* Sf9 insect cells.

**Expression construct:**

Full-length cDNA coding for the human ribosomal P0 phosphoprotein fused to a hexa-histidine purification tag.

**Biochemical tests:**

SDS-PAGE (purity > 80 %); Western-Blot with i: SLE sera (Systemic Lupus Erythematoses Disease); ii: monoclonal anti-hexa-His-tag antibody.

**Calculated molecular weight:**

35,096 Dalton

**Calculated isoelectric point:**

pH 6.2

**Immunological tests/Functionality:**

Standard ELISA test (checker-board analysis of positive/negative sera panels)

**Recommended buffer/storage and handling conditions:**

Recommendations for storage buffer: neutral to slightly alkaline pH; due to purification workup under denaturing conditions presence of up to 0.02 % SDS (or similar detergents) may be required for maintaining solubility. Storage temperature:  $-70^{\circ}$  to  $-80^{\circ}$  C. Repeated freeze/thaw cycles should be avoided.

**Coating concentration:**

0.3 – 0.7  $\mu$ g/ml (depending on the type of ELISA plate and coating buffer). Suitable for biotinylation and iodination.
